

Manifold for FLX-REKU system

FLX-PLO-EPP-R-P

Description

FLX-PLO-EPP-R-P manifolds are intended for use in domestic mechanical ventilation systems. These manifolds connect semi-rigid ducting with a 75mm diameter. In MVHR systems, there is usually one manifold for the supply air and one for the exhaust air. The construction material of the manifolds is expanded polypropylene (EPP), which also has an insulating function. Additional advantages of EPP are the lightness of the products with high stiffness at the same time, good acoustics and no susceptibility to corrosion. For building residential ventilation systems in ATC2 (D) airtightness class acc. to EN 17192:2018
